

The RF-84F is the reconnaissance version of the F-84F fighter-bomber. It retains all the recognition features of the F-84F with the following exceptions: The nose jet intake has been replaced by an intake in the root of each wing. These wing intakes are squared off and protrude well forward of the wing's leading edge along the fuselage side. The nose has been elongated and enclosed, to accommodate several aerial cameras. Possible configuration of the aircraft may include drop tanks under the wing near the fuselage and also near the wingtips.

AIR FRAME		OPERATIONAL DATA		POWER PLANT	
Mfr.	REPUBLIC	Max. Range (Naut. Miles)	2,000	No. of Engines	1
Wing Span	33.6'	Crew No.	1	Model No.	J-65
Length	47.5'	Max. Speed (Knots)	600 plus	Mfr.	WRIGHT
Combat Weight (Lbs.)	20,000 plus	Service Ceiling (Ft.)	45,000 plus	Type	Turbojet
				Rating Each	7,200#
